

Making it All work.....

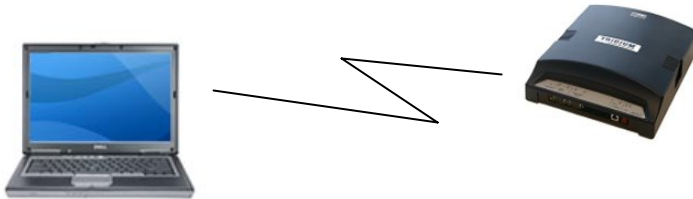

American Energy Management (AEM) specializes in building automation. We are systems integrators who furnish, install, and support, widely accepted, name brand, well established open systems equipment. All our products are available competitively, so you're not locked-in to us, or to a particular manufacturer.

Our systems and products can be supported by thousands of systems integrators worldwide and are from the same suppliers that many large control companies use, and often have private-labeled. These products are widely used which makes them cost effective and are very well tested.

Tridium and the Niagara Framework®

Tridium is the inventor of the Niagara Framework®, a universal software platform that allows integration and interoperability of diverse systems - regardless of manufacturer, or communication protocol - into a unified platform that can be easily managed and controlled in real-time over the Internet.

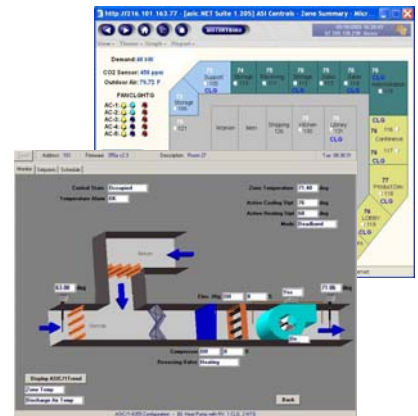

- Tridium Web Server
- Full color dynamic graphics
- Security and password protection
- Alarm and sensor graphing history
- Can e-mail or text message alarms
- Controller types (Lon, BacNet, etc)

- Internet browser from any location

AEM customers benefit by:

- Preserving their investments in existing devices and integrating them with new standards-based technologies.
- Controlling all their systems through a standard web browser.
- Combining information from different systems for better overall facility management.
- Allowing interoperable systems to eliminate vendor lock-in.
- Integrating factory supplied controls on new equipment to preserve warranties and lower installation costs

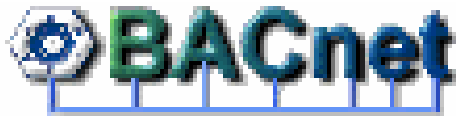

Tridium is an independent business entity of Honeywell International Inc and sells its products and services through multiple distribution channels, which include OEMs/resellers, independent systems integrators, and energy service companies. Today, Tridium has developed strategic partnerships with many high profile industry players including TAC, Honeywell, Staefa (division of Siemens), Distech Controls, Carrier, McQuay, ABB, and Schneider Electric/Square D among others. Today, there are over 400 trained and authorized distribution outlets, and over 120,000 instances of Niagara installed worldwide. Applications include energy management, building automation, telecommunications, security automation, lighting control, and total facilities management.

LON, BacNet and your existing controllers

AEM offers you a powerful solution that keeps your options open. Niagara is a proven, cost effective solution to bring all these systems together. It is a software platform designed from the ground up to be both vendor and protocol neutral. It is a software solution that will make all of your systems into a unified, easy to navigate web site, with full access to real time data and alarms. Most other control vendors want you to choose just one protocol and then try to sell you a proprietary front-end at that.

ASI Controls
Reliability Performance Value

AEM is an Energy Star Partner, and an experienced System Integrator. We are certified Value Added Resellers for ASI Controls, Tridium^{AX}, and Distech Controls. Products that work with LON, BacNet, OPC, ModBus and other protocols. In addition, we use and supply products from many other high profile manufacturers, and we can integrate to most existing systems as well as new open systems provided by others.
